

Three questions to ask about your child's school library

Did you know that over the past two decades, **hundreds of thousands of students across**Ontario have lost access to school libraries and the critical resources they provide?

The COVID-19 pandemic only accelerated this trend and has had a devastating impact on school libraries, staff and programming. Across Ontario, school library professionals have been re-assigned, library staff laid-off, and access to library spaces, books and resources cut off to students.

There are short- and long-term consequences for students:

- School libraries help reduce barriers to access. The closing of school libraries perpetuates inequality. Families with fewer resources rely on school libraries to help their children succeed as students. Low income and racialized children are disproportionately impacted.
- Studies have demonstrated the **relationship between academic achievement and access to a school library.** Improving literacy and reading skills boosts test scores in all subjects.
- School library professionals are instrumental for **building research and information literacy skills** to prepare students for the workforce, college and university.
- Books and library spaces are a source of **reassurance and comfort**, and contribute to children's better mental health and participation in school.

Parents: Ask your school principal or school board trustee about your child's school library

F.A.Q. About School Libraries

Who are school library professionals?

School library professionals include teacher-librarians, library technicians, and librarians with a Masters of Library and Information Science (MLIS) degree. **School library professionals complete qualifications in librarianship and have specialized skills** in selecting quality, age- and curriculum- appropriate books and resources and developing programming for students.

What kind of teaching do school library professionals do?

School library professionals collaborate with classroom teachers in developing meaningful, interactive programming and resources to complement the curriculum. School library professionals are essential in students developing:

- literacy skills and a love of reading;
- · critical information skills and research proficiency;
- technology skills, digital literacy and digital citizenship;
- and much more.

Why should a school library professional select the materials for my child's school library?

School library professionals have **specialized skills in selecting library materials** for the students of all ages and reading abilities.

- **Classroom Learning:** School library professionals work with classroom educators to ensure that classes have the learning resources needed to support the curriculum.
- Love of Reading: They also help to foster a life-long love of reading, getting to know the interests of individual students and tailoring their collection to reflect what the students want to read.
- Anti-Oppression: School library professionals curate the school library collection using antiracist, anti-bias and anti-oppressive frameworks to ensure the inclusion of appropriate and diverse representation for their unique school community.

What does a school library program look like if students can't access the physical library?

The school library program extends beyond the physical library space. School library staff:

- Deliver programming such as read-alouds, book clubs and maker activities,
- Co-teach with classroom teachers, and
- Select quality age- and curriculum- appropriate books and learning resources.

School library staff have adapted their programming to be delivered in-person and virtually. They also continue to play a leadership role in supporting teachers and students in an ever changing educational landscape.

F.A.Q. About School Libraries

How does the school library differ from the public library?

While public libraries are mandated to serve all Ontarians, school libraries are mandated to serve the school community. This means that the school library programing and collections are specifically designed to support the curriculum and learning goals of the school.

Ontario students can benefit from accessing their local public library's collections and from participating in the children's and teen's programming available at their local branch. However, students do not all have equal access to the public library. Geographic barriers, access to transportation, and availability of parents to visit the library all impact students' ability to access resources at the public library.

Having a staffed, well-resourced library in each school ensures that all students, regardless of barriers, have equitable access to the books and resources they need to support their learning and growth.
